

EXTERIOR DOOR FRAMES

PUT AN END TO THOSE CALLBACKS WITH THE FRAMESAVER™ FRAME

On a typical door frame, wicking, rot or insect damage occurs at the base because that's the portion of the frame which has the most exposure to moisture and insects. Total frame defense frames are full immersion treated with a clear paintable wood preservative with anti-fungal properties, and are backed by a lifetime limited warranty which includes frame replacement up to \$250 in labor costs.
