

ARCHITECTURAL PVC MILLWORK

VIRTUALLY MAINTENANCE-FREE.

Architectural PVC (poly chloride vinyl) millwork is virtually maintenance-free and is perfect for most homeowners' busy lifestyles. This durable product will not rot, crack or splinter. Because the material is not porous, it provides protection against moisture and insects, making its lifetime much longer than that of standard products.

Architectural PVC is durable enough to bend into custom round-top, oval, elliptical, octagonal or circular architectural designs. Using our 16' oven, the PVC sub-casing, brick mould and moulding profiles can also be shaped to conform to most architecture openings. With a variety of moulding profiles and trim boards available and the flexibility to use either oil or latex paint, The Detering Company's Architectural PVC Millwork is sure to complement any décor.

Note: Only offered in 1x4 and BM now, not as a jamb.

COMPONENTS OF A MAINTENANCE-FREE EXTERIOR DOOR FRAME
